1. Overview

The FWU Nagarik API provides programmatic access to Far Western University's student database for verification purposes. This document describes how to integrate with the Student Verify and Student Transcript endpoints, which are used for the Ministry of Education's student NOC process.

Property	Value
Base URL	https://emis.fwu.edu.np
Swagger UI	https://emis.fwu.edu.np/docs
Protocol	HTTPS (required)
Response Format	JSON
Authentication	API Key (via X-API-Key header)

Key Endpoints

Method	Endpoint	Auth Required	Description
GET	/api/student/verify	Yes (API Key)	Verify student by registration number and DOB
GET	/api/student/transcript	Yes (API Key)	Retrieve student transcript

2. Authentication

The API uses API Key authentication. Include your API key in the X-API-Key header with every request.

X-API-Key: <YOUR_API_KEY>

API keys are validated against the server database. Each key can be:

- Named and assigned to an organization
- Activated or deactivated at any time
- Set with an optional expiry date

Contact FWU to obtain your API key.

3. Student Verify Endpoint

Request

GET /api/student/verify

Query Parameters:

Parameter	Type	Required	Description
registration_number	string	Yes	Student's FWU registration number
dobAD	string	Yes	Date of birth in Nepali calendar (Bikram Sambat), format: YYYY-MM-DD

Full cURL Example:

```
curl -X GET
"https://emis.fwu.edu.np/api/student/verify?registration_number=7401001&dobAD=2058-04-15" \
-H "X-API-Key: YOUR_API_KEY_HERE"
```

Response

200 OK - Student Found:

```
{
  "data": "mg-2007-1-1-2242",
  "message": "Success",
  "otherData": [
    {
      "regdNo": "7401001",
      "firstName": "Ram",
      "middleName": "Bahadur",
      "lastName": "Thapa",
      "dobAD": "1995-11-27",
```

```

    "programName": "B.Sc. Computer Science",
    "intakeYear": "2078",
    "studentStatus": "Active",
    "level": "Bachelor",
    "school": "Central Department of Computer Science",
    "cgpaScore": 3.45,
    "graduateYear": "2082"
  }
]
}

```

404 Not Found:

```

{
  "message": "No record found for the given registration number / DOB"
}

```

400 Bad Request (missing parameter):

```

{
  "message": "registration_number is required"
}

```

or

```

{
  "message": "dobAD is required"
}

```

Note: A student may have multiple records in otherData if enrolled in multiple programs.

4. Student Transcript Endpoint

Request

GET /api/student/transcript

Query Parameters:

Parameter	Type	Required	Description
registration_number	string	Yes	Student's FWU registration number
dobAD	string	Yes	Date of birth in AD (YYYY-MM-DD)

cURL Example

```

curl -X GET
"https://emis.fwu.edu.np/api/student/transcript?registration_number=7401001&dobAD=2058-04-15" \
-H "X-Api-Key: YOUR_API_KEY_HERE"

```

Response

200 OK - Transcript Found:

Returns the student's transcript data including semesters, subjects, and grades.

404 Not Found:

```
{
  "message": "No record found for the given registration number / DOB"
}
```

5. Response Field Reference

Verify Endpoint

Field	Type	Description
Data	string	Registration number (echoed back)
message	string	Status message (Success or error description)
otherData	array	Array of student records matching the query

Student Data Fields

Field	Type	Description	Example
regdNo	string	FWU registration number	"7401001"
firstName	string	Student's first name	"Ram"
middleName	string	Student's middle name	"Bahadur"
lastName	string	Student's last name	"Thapa"
dobAD	string	Date of birth (Nepali calendar)	"2058-04-15"
programName	string	Enrolled program name	"B.Sc. Computer Science"
intakeYear	string	Year of admission (Nepali calendar)	"2078"
studentStatus	string	Current status	"Active", "Graduated", "Discontinued"
level	string	Study level	"Bachelor", "Master", "PhD"
school	string	School/department name	"Central Department of Computer Science"
cgpaScore	number	CGPA score (null if not applicable)	3.45
graduateYear	string	Graduation year (null if not graduated)	"2082"

6. Error Handling

HTTP Status Codes

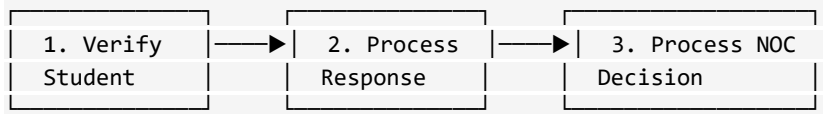

Status	Meaning	Action
200 OK	Student found and verified	Process the otherData array
400 Bad Request	Missing required parameter	Check registration_number and dobAD are provided
401 Unauthorized	Authentication failed	Verify your API key is valid and active
404 Not Found	No student record matches	Verify the registration number and DOB are correct
500 Internal Server Error	Server-side error	Retry after a brief delay; contact FWU support if persistent

Common Error Messages

Message	Cause	Resolution
"registration_number is required"	Missing registration_number query parameter	Include registration_number in the request URL
"dobAD is required"	Missing dobAD query parameter	Include dobAD in the request URL
"No record found for the given registration number / DOB"	No matching student in database	Double-check registration number and date of birth
"Invalid API key."	Missing or unrecognized API key in header	Include a valid X-API-Key header
"API key has expired."	The API key has passed its expiry date	Contact FWU to obtain a new key

7. Integration Guide

Step-by-Step Process

Step 1: Verify Student

```
# Verify student with API key
curl -X GET
"https://emis.fwu.edu.np/api/student/verify?registration_number=7401001&dobAD=2058-04-15" \
-H "X-API-Key: YOUR_API_KEY_HERE"
```

Step 2: Process Response

- If message is "Success" and otherData contains records, the student is verified.
- If status is 404, the student record was not found — verify the input data.
- If status is 401, check that your API key is valid and active.

8. Security Notes

Item	Requirement
API Key	Keep confidential. Do not expose in client-side code, logs, or public repositories.
HTTPS	All API calls must use HTTPS. HTTP requests will be rejected.
Audit Trail	All API requests are logged for security and compliance. Include: timestamp, client IP, endpoint accessed, and verification result.
Key Rotation	Contact FWU to rotate your API key if compromise is suspected.

9. Support & Contacts

Role	Contact
Technical Support	[FWU IT Department Email]
API Issues	[FWU Technical Lead Contact]
